Bootstrap Script

- Bootstrapping allows us to write and put a startup script while launching an EC2 Instance so that it execute automatically as soon as the instance launch.

Bootstrap Script

- Create Linux EC2 Machine
- Enter the Name
- Select AMI (Amazon Linux)
- Choose an Instance Type
- Select Key pair or Create new key pair
- Enable SSH Port & HTTP Port

Bootstrap Script

- Select Configure Storage
- Click on Advanced Details
- In the user data Add Bootstrap Script
- Add Code: [Click Here](#)
- Copy the Public IP and Paste in browser
- **Task: Create webserver using bootstrap script & then edit index.html**
